

The JGI-HYDROMETAL group is the ideal industrial partner in the creation and deployment of innovative and efficient solutions for non-ferrous metals recycling. HYDROMETAL France was incorporated in 2021 and will be dedicated to the recycling of secondary complex materials concerning non-ferrous metals by hydrometallurgical means. More specifically, this site will be active in the treatment of complex materials loaded with Zn, with a view to the production of zinc salts. In this project, IPS has been responsible for the overall design of the plant modification as it was originally designed for processing sulfate.

Oxide Washing

Principal project data

Modification of existing plant for new process

Scope IPS
