Feasibility Study for modifications of existing packaging line

Medinsa, Spain, 06/2009 - 07/2009

LIFE SCIENCES | PROJECT FEASIBILITY | SPAIN

Medinsa is a Spanish company dedicated to research, development and commercialization of prescription pharmaceuticals for third parties.

Medinsa has undertaken a plan renovation in three parts: firstly, with the production area of solid pills followed by allergenic production area and finally with the remodeling of the packaging area.

Currently this area extends in a 2500 m2 on one floor remodeling, including 7 production lines. During the renovation, a line was removed and another reduced.

According to our feasibility study, the renewal of the packaging area is planned in 3 phases. The first phase involves the reorganization of civil works and finishes, the secondary phase is renovating an empty part of the building, and the third part is the renewal of a reserve area.
