

In 2002 IPS took the strategic decision to construct an own building in Eisenhüttenstadt, Germany, close to the Polish border. The Technological Center (TC) serves as office and centralises all Group-IPS method development as well as Project Management Training activities.

In 2004, the TC was extended by a building of 260m. The TC is equipped with the latest "Plug and Play" technology and hosts trainings, seminars and events of regional and supra-regional importance.

Two times a year, IPS organises a Project Preparation Training that is attended by IPS employees as well as customers.
