

AM Mardyck is investing in a new production unit aiming to produce steel coils for manufacture of electrical motors for the automotive sector. The investment is meant to occur in 2 phases, each grouping several key technological equipment. The process includes cold rolling, annealing, shear, coating, packaging, pickling. Total CAPEX is around 300 milion EUR. In this project, IPS acts as owner representative in the execution phase for all construction site activities. IPS mobilized an integrated team composed of construction and project management specialists.
