

BioWanze, which is a part of Südzucker, produces bio-ethanol and human & animal feeding additives using beet syrup and wheat. Through the use of biomass as primary energy source instead of fossil fuel 70 % CO₂ will be saved.

Group-IPS has worked in close partnership with the BioWanze project team to achieve the quantity survey mainly for initial order price contracts, which is an important part of the orders. IPS were involved in the closure processes of these contracts, including claim management.

As an extension to this mission we have assisted BioWanze in the preparation of the Asset Management for their plant. Within a period of 6 months we successfully achieve complete split-up of the investment budget to the level use for individual assets.

Multiple Projects

BioWanze nv, Belgium, 05/2008 - 02/2009

CHEMICALS

PROJECT PREPARATION

BELGIUM

Principal project data

Multiple projects during the construction of a 300.000 m³/y bio-ethanol plant.

Scope IPS

Project Preparation

- Quantity survey
- Asset management
- Shut down preparation & coordination
